

Drip Water: what their public marketing signals are actually saying

A short, evidence-based read of what's publicly visible — not internal data I don't have access to.

How this was built: every point below is checkable by anyone, using Drip's own product packaging as listed by major retailers, and trade press reporting quoting the company directly. Nothing here claims insight into revenue, sales volume, or internal reporting.

1. The return address doesn't match the brand

- ❑ Drip's own cans, as listed on Morrisons, Tesco and Holland & Barrett, print a return address of "www.thedrip.vip" — not dripwater.co.uk, or anything that reads as the brand name on the can in front of you.
- ❑ A customer with a genuine question, typing what's actually printed on the packaging, is one unfamiliar domain away from the brand rather than one obvious step away.

2. A genuinely good story isn't being told

- ❑ When a can supplier fell short, Drip bought 80,000 unused aluminium bottles from the collapsed Almighty Water brand, re-sleeved them in its own branding, and checked the move with Trading Standards first — a transparent, sustainability-aligned save reported in trade press.
- ❑ None of that appears in the product's own consumer-facing copy, which still runs the same generic "plastic bad, cans good" line every canned water brand uses.

3. A real differentiator, sitting unused

- ❑ "We rescued 80,000 bottles from a competitor that went under, rather than manufacture new ones" is a genuinely specific, hard-to-copy claim — the opposite of the generic sustainability language every rival can uses.
- ❑ Right now that story lives in a specialist trade publication, not on the can, the website, or anywhere a buying customer would see it.

4. Rapid retail expansion raises a consistency question

- ❑ The same product is now listed across Morrisons, Tesco, Holland & Barrett, WH Smith Travel and independent wholesalers — genuinely fast, impressive distribution growth for a brand founded in 2023.
- ❑ Worth checking whether packaging, domain, and messaging stay consistent across all of them, or whether the same mismatch in finding one shows up differently depending on which retailer's listing a customer happens to see first.

What this pattern usually means: a young, fast-scaling brand's energy naturally goes toward securing the next listing, not revisiting the domain printed on a can six months ago. The Almighty Water story is the clearest sign of this: it's a better brand asset than anything currently in the marketing, and it's sitting one PR write-up away from being used properly.

What I'd check first, in order

- 1

Make the printed return domain match the brand, everywhere. A can reprint is a real cost, but every day on shelf is a customer question sent to the wrong-looking address.
- 2

Put the Almighty Water story into the brand's own content. It's a specific, verified, sustainability-led story competitors can't simply copy — that's rare, and it's currently free marketing sitting unused.
- 3

Audit packaging and copy across all five-plus retail listings. Fast distribution growth is the moment small inconsistencies get copied across the widest number of shelves, not the moment to leave them unchecked.

Faisal Mahmud
FRACTIONAL MARKETING DIRECTOR

I review measurement, brand consistency and campaign structure for a living. If this kind of gap looks familiar in your own business, it's worth a proper look.
