

PUBLIC SIGNAL REVIEW

Dishoom is ahead on AI readiness. The next opportunity is location-level clarity.

Dishoom’s public content is unusually rich for hospitality, and its llms.txt file shows deliberate thinking about how AI systems represent the brand. The sharper question is whether every guest receives equally clear, current information for the café they intend to visit.

SCOPEPublic sources only. No access to revenue, campaign, customer or internal strategy data. Observations reviewed on 21 September 2026; hypotheses require internal validation.

THE WIDER LESSON

Structured information creates value only when humans and machines receive the same current answer.

What is publicly visible

OBSERVED 01

The brand publishes an llms.txt file

Dishoom provides structured guidance for AI tools and explicitly warns against using generic or outdated booking rules. That is an advanced public signal of information governance.

OBSERVED 02

Booking rules vary by café

The estate includes location-specific booking and walk-in arrangements. Variation can be operationally sensible, but it increases the importance of clear location pages.

What the evidence may mean — and what would disprove it

POSSIBLE IMPLICATION

A hypothesis, not a verdict

Dishoom has already identified the risk of generic answers. Applying that discipline to every human-facing location journey could reduce expectation gaps without changing the underlying operating model.

ALTERNATIVE EXPLANATION

A credible reason the signal may be benign

Guests may already reach the correct location page from maps, booking links or CRM messages. The variation itself may be part of a deliberately flexible service model, not a content failure.

SMALLEST USEFUL TEST

Learn before committing to a larger fix

Ask first-time visitors to answer three questions from a location page: can I book, when might I queue, and can I order delivery here? Track confidence and errors by café.

What to check internally

- 01 Does each location page lead with its own booking rule?
- 02 Are AI guidance, maps data and on-page copy updated from one source?
- 03 Can delivery availability be answered without a redundant postcode journey?
- 04 Who owns policy changes when operations vary by café?
