

Adobe Express: what their public marketing signals are actually saying

A short, evidence-based read of what's publicly visible — not internal data I don't have access to.

How this was built: every point below is checkable by anyone, reading adobe.com/express's own live page content directly. Nothing here claims insight into revenue, subscriber numbers, or internal reporting.

1. The same testimonial, twice in a row

- The exact same quote, from the exact same person — "I love using Adobe Express to create flyers for my small business..." Erica X., Owner at Photoshoots by Erica — appears twice, back to back, on the page.
- Consistent with a testimonial carousel stuck on one slide rather than rotating through genuinely different voices.
- A repeated quote is a small thing to notice, but it's exactly the kind of detail a careful visitor remembers about a brand pitching itself as detail-oriented.

2. Unfinished template text, live on the page

- Strings like "Your search for did not yield any results," "coll-no-results-text," and "coll-result-mobile-text" appear directly in the page's own crawlable content — the kind of placeholder that's meant to be replaced by real data before anyone sees it.
- It reads as a resources or filter widget rendering its empty and broken states by default, rather than the content it's meant to show.

3. Enterprise logos, consumer pricing, no bridge

- "The world's leading businesses use Adobe Express" sits directly beside IBM, Accenture and Red Hat — immediately next to a \$0–\$19.99/month consumer pricing table and a small-business flyer testimonial.
- Nothing on the page distinguishes which plan actually serves an enterprise buyer versus an individual creator, despite both audiences being pitched in the same breath.

4. Tiers are described by credits, not outcomes

- Free, Premium and Firefly Pro are differentiated mainly by AI credit counts and asset access — not by what a new visitor is actually trying to achieve.
- For someone who doesn't yet know what an "AI credit" buys them, the comparison answers "how much do I get" before it answers "which one is actually for me."

What this pattern usually means: a product this widely used, iterating this fast, will always have a few components mid-refresh at any given moment — that's normal. What's worth noticing is that both issues found here sit on trust-relevant elements: the exact proof (testimonials) and the exact moment someone tries to find something (search). Those are the two places on any page where a small glitch does the most damage to confidence, precisely because they're supposed to be the reassuring parts.

What I'd check first, in order

- 1 Fix the testimonial carousel first.** Social proof that visibly repeats itself undermines the very thing it's there to build — trust in a product with genuinely more than one satisfied customer.

- 2 Audit the resources widget for leaked placeholder states.** If it's showing broken text by default, it's worth checking what it looks like when it's actually working too.

- 3 Split enterprise and individual messaging clearly.** A named path for "which plan is right for a team like IBM's" versus "which plan is right for me" would resolve the mismatch directly.

Faisal Mahmud

FRACTIONAL MARKETING DIRECTOR

I review measurement, brand consistency and trust-relevant page elements for a living. If this kind of gap looks familiar in your own business, it's worth a proper look.
