

# Heathrow Marketing Teardown: Passenger Trust and Digital Experience

Heathrow's digital estate mixes live operational information with commercial services. The outside-in question is whether message order actually adapts to a passenger's real state — disrupted, or simply planning ahead.

**SCOPE**Public sources checked on 23 September 2026. No claim is made about revenue, customer data, campaign performance or internal strategy.

**THE WIDER LESSON**  
In a high-stress journey, reassurance earns the right to sell the next service.

## What is publicly visible

|                                                                                                                                                                                                                                                                                                                             |                                                                                                                                                                                                                                                                                         |
|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <p><b>OBSERVED 01</b></p> <p><b>Operational information sits beside commercial services</b></p> <p>Flight detail and terminal pages connect live information with parking, Heathrow Express, fast track, lounges and planning tools. This is commercially logical because the same traveller may need several services.</p> | <p><b>OBSERVED 02</b></p> <p><b>The app promises more contextual reassurance</b></p> <p>Heathrow promotes live flight alerts and, for some journeys, updates covering check-in, gate, immigration or baggage. That creates a more useful relationship than a one-off status lookup.</p> |
|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|

## What the evidence may mean — and what would disprove it

|                                                                                                                                                                                                                                                                                                                             |                                                                                                                                                                                                                                                                                  |
|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <p><b>POSSIBLE IMPLICATION</b></p> <p><b>Message order should change with passenger state</b></p> <p>A disrupted or late-running passenger first needs certainty. A traveller planning weeks ahead may welcome parking or lounge options. Treating both states alike risks weakening trust or missing relevant revenue.</p> | <p><b>ALTERNATIVE EXPLANATION</b></p> <p><b>A credible reason the signal may be benign</b></p> <p>Heathrow may already alter messages using flight status, terminal, cookies, app state or booking data. The public pages reviewed cannot reveal the full decisioning logic.</p> |
|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|

## THE SMALLEST USEFUL TEST

### Learn before committing to a larger fix

Reorder secondary messages by journey state. Put reassurance first during disruption and planning services first for stable future flights. Compare task completion, app uptake and ancillary conversion.

## What I would check internally

- 1 Which passenger states generate the highest support and repeat-status activity?
- 2 Do commercial modules change when a flight or terminal is disrupted?
- 3 What proportion of one-off flight lookups become tracked app journeys?
- 4 Can relevance increase ancillary conversion without reducing information trust?
